

Timer Credit Board

The COIN+TM timer credit board is a new departure in machine control electronics. It combines the well known and reliable COIN+ technology with timer functions usually provided by runback timers or timer relays to provide a single board solution to machine control for kiddie rides and other timer applications such as gaming table lights timers.

Features

- **Standard connection to coin mechanism.**
- **Simple connection to optional 4 digit LED display.**
Display can show time remaining as 0000-9999 seconds or 00.00 to 99.59 minutes/seconds.
- **Simple screw connections to power, lamps, buttons & machine.**
- **Coin counter output for audit and metering.**
- **Optional relay output.**
- **Full control of Electronic Coin Mechanism Lamp.**
ON - indicates machine 'ready'.
OFF - indicates machine 'out-of-service'.
FLASH - indicates more coins are required.
- **Full control of Coin Mechanism Coin Inhibit.**
When the machine is busy coins can be rejected.
Individual coin types can be permanently rejected.
- **Extensive range of coin/credit combinations.**
16 different pence-per-credit settings.
- **Extensive range of time/credit combinations.**
1 to 99 seconds or 1 to 99 minutes per credit.
- **Full handshake with machine.**
Time is not issued unless the machine is ready.
During timing machine ready becomes a PAUSE input.
A Start Button may be connected.
The machine can stop coins being accepted.
- **Continuous self test.**
Invalid configuration detection with fail-safe and warning indicator.
- **Never loses partial credit.**
